

## COMPANY PROFILE

### A. About Us

Kharinta Clinic offers general and specialist dental & skin care. Years of dedicated service to our patients and clients have earned us their trust which won for us a well-deserved reputation as a leading dental care provider in the Bintaro-BSD-South Jakarta area of the city.

At Kharinta, we provide a comprehensive range of dental services including general dental treatment and specialist dental services such as Orthodontics, Pedodontics, Aesthetic or Cosmetic Dentistry and Implant Surgery.

We are an amalgam/mercury-free practice. With today's emphasis on cosmetics and the improvements in cosmetic tooth colored filling materials, there is no need to place black or silver colored metal fillings in your teeth containing the highly toxic, heavy metal mercury. Although many studies show that these metal fillings do not cause health problems, most people, given the choice, don't want this type of mercury containing fillings in their mouths or their children's. Many dental offices still use these metal fillings mainly because they are much easier, take less time and effort and are cheaper to do. Also, a poorly done tooth colored filling will not last long.

At Kharinta, we take pride in our high degree of professionalism and care. We observe the highest standards in hygiene practice and our clinic is equipped with state of the art equipment, at the same time ensuring a comfortable environment before and during treatment.

Weekday: 8 AM - 8 PM

Weekend: 8 AM - 5 PM

### D. Services

#### 1. Dental Care

##### GENERAL DENTISTRY

Includes comprehensive general dentistry, family primary care, and emergency dental care. General practitioners provide comprehensive examination and treatment planning.

## ENDODONTICS / ROOT CANAL TREATMENT

The aim of the treatment is to remove all infection from the root canal. The root is then cleaned and filled to prevent any further infection.

## ORTHODONTICS

Brings teeth, lips, and jaws into proper alignment through dental braces and other orthodontic treatments.

## COSMETIC / RESTORATIVE DENTISTRY

Includes procedures such as composite resin bonding, teeth bleaching and whitening, crowns, porcelain veneers, natural tooth colored fillings, and dental implants to restore teeth to nature's ideal. Contrary to what some may think, aesthetic dentistry is not just about flashing a perfect set of teeth when smiling, but it is about ensuring good dental health and promoting a general sense of well being.

## PAEDIATRIC DENTISTRY

Pediatric dentistry is the branch of dentistry dealing with the care and treatment of children teeth. Most common pediatric dentistry treatment include dental health education, filling, endodontics for children, extraction, pit fissure sealant, topical application fluor and preventive orthodontic.

## ORAL SURGERY

This goes beyond removal of teeth. Additional oral surgery procedures includes implant placement, bone grafting, and impacted wisdom teeth removal.

## PERIODONTAL TREATMENT

The treatment required to control periodontal disease involves much more than just a teeth cleaning.

## PROSTHODONTICS / PROSTHETIC DENTISTRY

Pertains to the diagnosis, treatment planning, rehabilitation and maintenance of missing, broken down or deficient teeth and/or oral and maxillofacial tissues using biocompatible substitutes. Crowns or caps, dentures and bridges are typically the restorations used to achieve these results.

## DENTAL HYGIENE

Includes routine scale and polishing of teeth as well as periodontal root debridement procedures under local anesthesia, placing pit and fissure sealants, and performing teeth bleaching (whitening).

2. Skin Care
3. Acupuncture Treatment
4. Psychology Treatment

## **E. Technology**

### **DIGITAL XRAY**

Digital radiology technology uses computerized sensors rather than film to capture images of the teeth. Patients can keep their panoramic photo or we can send it via email.

### **DIGITAL PHOTOGRAPHY**

High resolution color digital photographs are taken on every patient who desires an improvement in the esthetics of their smile.

### **HYGIENIC STANDARDS**

For the safety & well being of our Patients, Our Clinic takes utmost care about hygiene & sterilization. Most of the items used are disposable. The Extraction and various other Instruments are sterilized using Digital Auto Clave & Hot Air Sterilizer. Instruments and other items not in use after sterilization are kept in Ultra-Violet Storage Cabinet. Before treatment, patients are provided with separate set of fully sterilized instrument.
